PROGRAM DESCRIPTION

The Diploma in Logistics Management program will develop student's skills in managing the flow of goods from the planning to the implementation stage and ensuring a smooth circulation of information between manufacturers, suppliers, retailers, service providers and consumers.

Logistics is defined as the procurement, maintenance and punctual transportation of materials to the right place at minimum cost. At the heart of any economy are healthy industrial and service sectors.

However, merely producing products without taking into account the process involved is insufficient, as ideally, they should be affordable, efficiently handled, stored, maintained and distributed before being sold. Hence, successful analysis and implementation of logistics services is the key to adding value for customers.

This program aims to link and synchronize the marketplace, transportation systems, distribution network, as well as the manufacturing processes together effectively to ensure that services meet customer satisfaction.

In a nutshell, this program presents a broad view of logistics acquired through a combination of examinations, projects, and coursework. Students learn the relevant academic and vocational logistics management principles, skills and knowledge through innovative teaching and learning methodologies. With this, students are not only able to perform effectively and efficiently within a variety of contemporary logistics environments, but are also properly equipped to face the numerous dynamic challenges in local and global industries.

This Diploma program is recognized by the Ministry of Higher Education (MoHE) and is approved by Malaysian Qualification Agency (MQA).

DIPLOMA in LOGISTIC MANAGEMENT

Course Modules
